Education

University of Waterloo — Waterloo, ON
Honours Bachelor of Computer Science, Co-op — *Expected Apr. 2031*
President's Scholarship of Distinction | Cindy Colvin Computer Science Scholarship

Merivale High School — Ottawa, ON
International Baccalaureate Diploma — *June 2026*
IB Score: 43/45 | 98.67% Average | Silver Medal | Gold Community Involvement Award | French Immersion Certificate

Technical Skills

Languages: Python, Java, JavaScript, TypeScript, HTML/CSS, SQL
Frameworks & Tools: React, Next.js, Git, VS Code, Jira, Arduino IDE, Edge Impulse, Socket.IO
Technologies: REST APIs, Google Gemini API, Machine Learning, Embedded Systems, BDD Testing

Experience

Software Automation & Testing Intern — July 2025 – Aug. 2025
Nokia Future Tech Program — *Ottawa, ON*

- Designed and implemented automated BDD test suites in Python using the Radish framework, covering 50+ test scenarios and cutting manual regression testing time by roughly 20%.
- Wrote and executed 30+ API test scripts against REST endpoints, uncovering 15+ defects and functional gaps.
- Logged and triaged 40+ defects in Jira, contributing to sprint planning and estimation across 6 Agile sprints.

Teaching Assistant — Sep. 2025 – Aug. 2026
Kumon North America — *Ottawa, ON*

- Delivered individualized math and reading instruction to 30–40 students ages 5–14 spanning 3+ skill levels.
- Tracked and evaluated weekly progress for 30+ students, adjusting personalized learning plans to improve mastery and consistency.
- Communicated biweekly progress updates with instructors and parents for 30+ students, supporting academic growth and retention.

Projects

Auri – AI-Powered Accessibility Wearable — *github.com/lindaeq/auri*
React, Next.js, TypeScript, Edge Impulse, Arduino UNO Q

- Built an AI-powered wearable using Edge Impulse audio classification models to detect essential sounds, delivering real-time haptic, OLED, and LED alerts for deaf and hard-of-hearing users.
- Developed a full-stack companion app in React, Next.js, and TypeScript with the Gemini API and Socket.IO to customize vibration patterns and alert settings.
- Engineered a hardware prototype on an Arduino UNO Q with microphone, OLED, RGB LED, and vibration motor, communicating in real time with the backend.

CodeMap – Interactive Codebase Dependency Visualizer — *github.com/lindaeq/codemap*
Python, FastAPI, D3.js, JavaScript, HTML/CSS

- Built a tool that parses Python codebases via the `ast` module into interactive, force-directed dependency graphs sized by lines of code and import count.
- Developed a FastAPI backend for GitHub-repo and zip-upload analysis, paired with a D3.js frontend for visualization, file exploration, and project stats.
- Designed a stateless, database-free architecture deployable on Render, plus a standalone offline mode for local use.
